Whitepaper

The new generation token that collects NFT in a Social.

SONIC(K) SOCIAL

Sonic(K) is an aggregator of collectible and tradable NFTs directly into Sonic platform.

Sonic(K) WhitePaper for the creation of the Social NFT together with the Sonic(K) token

WHAT IS SONIC(K) SOCIAL $SON

Sonic(k) is a Social that involves many interactions with the outside world and with users from all over the world.

By connecting they interconnect and interact with news, links, entertainment games but above all digital NFTs that can be exchanged and collected as if they were a simple image.

The Social(App) platform will be constantly updated to implement new features.

$SON is the Sonic Social governance token

THE PROBLEM:

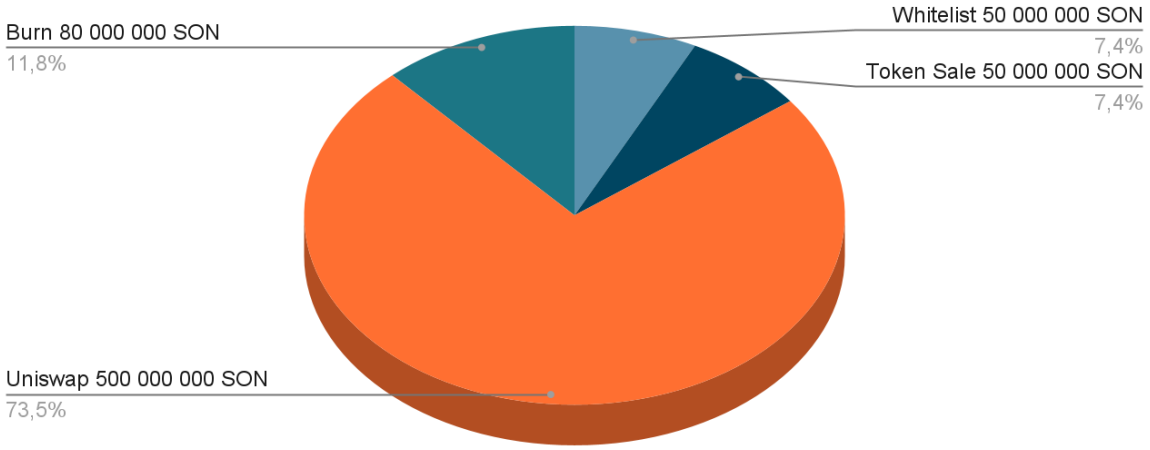
At the moment there is no app that collects NFTs and interconnects to the blockchain with all the interactions of a real social network.

THE SOLUTION:

The concept is to use Sonic Social and interact with friends, have fun and use new technologies such as digital collections in an easy way. NFT digital stickers are collectible, exchangeable and can grow in value.

TOKENOMICS

TOTAL SUPPLY 1.000.000.000 $SON

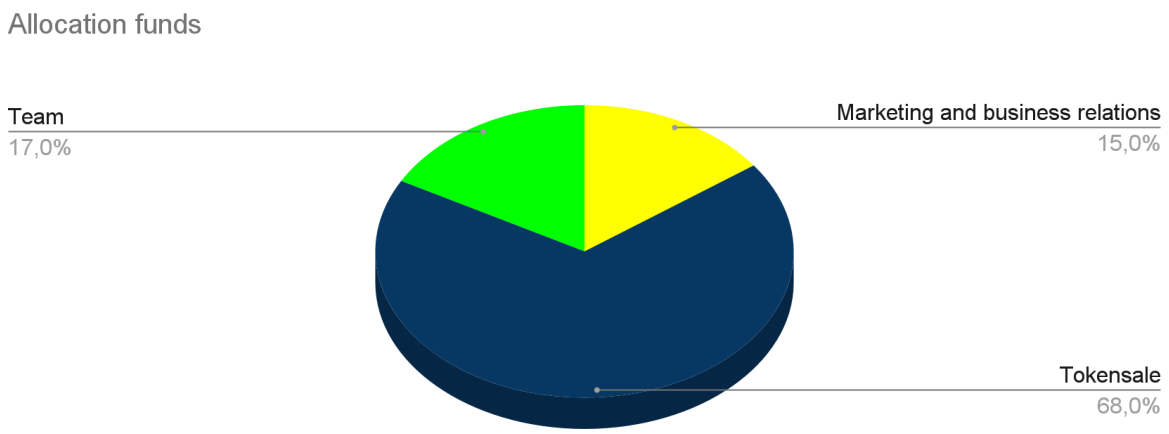


Sonic(k) is a DEFI, decentralized and hyper deflationary financial token that operates on the ethereum blockchain (ERC777 also incorporated ERC20). Later on Binance Smart Chain (BEP-20). The $SON sales campaign will be managed in several phases to allow the distribution of the token as evenly as possible:

- **Private Sale 50.000.000 $SON:** the first phase by whitelist intended for early investors who will benefit from a bonus.

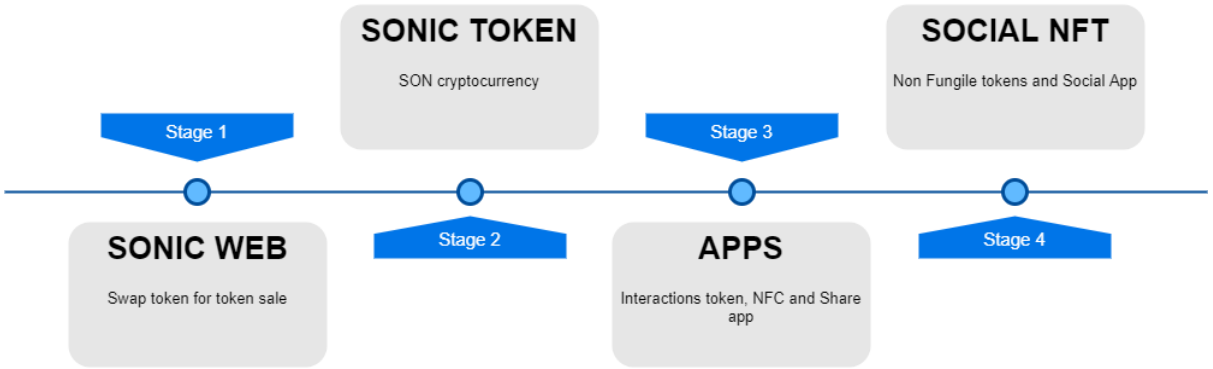
- **Token Sale 50.000.000 $SON:** the second phase of issuing tokens by proprietary Swap at a fixed price.
- **Open sale 500.000.000 $SON:** the Eth-Son pool will be created on Uniswap and investors will be able to buy through the famous Dex.

ALLOCATION OF THE $SON TOKEN



- **Tokensale 68%:** 680,000,000 $SON will be distributed in stages.
- **Team 17%:** 170,000,000 $SON will remain with the founding team
- **Marketing and business relations 15%:** 150,000,000 $SON will be used as an incentive for marketing, product development and collaborations.
- **10% of Team Tokens will remain locked for 1 year**

ROADMAP



The roadmap is indicative because each Stage can add new features to the ecosystem because we deal with microservices that are exploited to agglomerate the true Social platform.

Sonic(k) Core Development
Sonic(k) chain node
Marketing and Partnerships
Entry level integrations
Sonic(k) Web Development
Dex Swap
Entry-level microservices
Creation of the token and the first interactions
Creation of NFTs tokens
Creation of interactions with NFTs tokens
Sonic Social and Collections and more.

STRATEGIC BURN

Many projects burn tokens to protect market value. Performing a "burn" means removing a certain number of tokens from circulation, thus increasing the scarcity effect.

The strategic "burn" of 80.000.000 $SON tokens will be assessed based on market conditions once the platform is active.

MARKET ANALYSIS

The NFT market is booming especially in this digital age full of obstacles but also of great opportunities. In recent years, efforts have been made to bring digital art to the attention of the general public.

We of the Sonic(k) Team think that bringing NFTs on a social network leaves room for the empathic interaction of many

investors, friends, collectors and above all young people who are able to recognize and understand nature and digital but present art in a file.

Many young people are happy when they interact with their friends and especially if there is a goal like the NFTs that can be collected directly in a Social. With our app we try to give young people and others the opportunity to interact with a new tool, exchange NFTs they like best or to collect whatever they want as if they were simple images.

TECHNOLOGIES

Sonic(k) chain is based on GraphQL Prisma but has many latest generation technologies such as Blockchain Ethereum, GraphQl, Html5, typescript ORM, Java, Javascript, Angular, Ionic and many others.

Next.js

GraphQL

NestJS

Express

Apollo

hapi

Html5

Css

Angular

Ionic

Blockchain

ethereum

Metamask Javascript Java Api

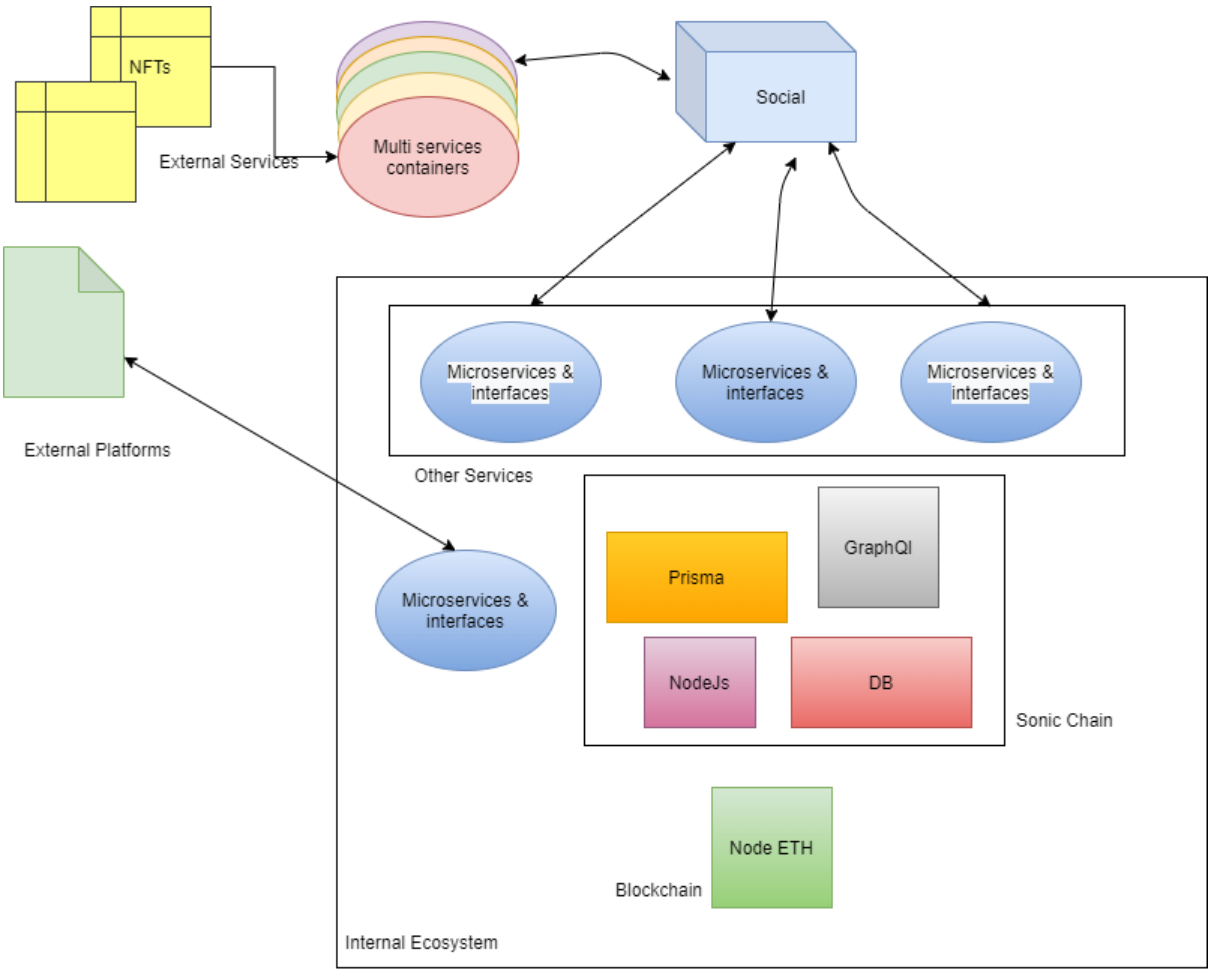
THE SONIC(K) CHAIN NETWORK

The Sonic network is a set of heterogeneous systems capable of interoperating with each other using ETH or BSC network blockchains in the future. Thanks to this ecosystem we are going to create a microservices swapping system in the social network.



COMPOSITION OF TOKENS

TOKEN $SON

We are among the first to use the new ERC777 standard. ERC777 is a security-based token. The token is an improved version of the ERC20 and prevents the loss of tokens due to a bug on the ERC20.

The advantages of this token are undoubtedly security but there are other peculiarities:

- offers a function to identify the receipt of tokens and initiate a smart contract immediately after the first transaction.
- reduces friction during transactions between crypto.
- low transactions and overheads.
- enables users to reject transactions from blacklisted addresses.

TOKENS NFTs

ERC721 NFTs are non-fungible tokens used to uniquely identify something or someone. This type of token is used by Sonic(K) Social to manage collectibles as if they were special digital collectible stickers.

This type of tokens are unique and may have a different value from each other in the same smart contract due to age, rarity or even its appearance.

Sonic(K) Social brings them both together to give value to those who own them.

GOVERNANCE OF THE TOKEN $ SON

$SON is an ERC777 governance token that connects the Social to NFTs tokens and allows them to be exchanged by connecting users from all over the world.

FOR OUR INVESTORS

Why is a fundraiser necessary?

Sonic (k) aims to adopt the blockchain as its integrated system and even if it is not cheap we aim for the maximum for our investors.

Thanks to your contribution, our knowledge is added to the space of new technologies on the market.

Your community will lead us to distribute the new $SON token after the fundraise.

We will adopt a Whitelist and any investor who applies via whitelist will get $SON through ETH or BNB at a fixed rate of 0,01 USD plus a 25% bonus.

After the Whitelist we will release the Token Sale through a Swap system in which $SON will be bought with ETH. That will be used directly by you investors via PC to support the development of the project. We thank you for your contribution.

SONIC(K) TOKEN FAMILY

With us you will feel at ease, every member of the community will be appreciated, respected and valued. There are no prejudices or anything else, we love simplicity. Join the SONIC (K) family!
